MHN-TD 250W FC2

Low wattage metal halide lamps are double-envelope, single- or double-ended lamps with a quartz discharge tube containing high-pressure mercury and a mixture of dysprosium, holmium and thulium halides (MHN-T and MHN-TD) or tin iodide (MHW-TD), with sodium and thallium added for colour correction and arc stabilisation. They require an ignitor and a ballast, which influence the lamp performance.

MHN-T lamps are single-ended and housed in a tubular clear hard-glass outer envelope. A double sleeve of doped quartz around the discharge tube protects against UV radiation and the consequences of explosion. These lamps can therefore be used in open luminaires. The burning position of MHN-T lamps is universal but the colour temperature varies with the burning position causing visual differences.

MHN-TD and MHW-TD lamps are double-ended and housed in a tubular clear UV-block quartz evacuated outer envelope. In the luminaire a hard glass cover is obliged, which serves to avoid injury or damage as a consequence of possible discharge tube shattering. MHN-TD and MHW-TD lamps have a horizontal burning position, with a tolerance of +/- 45 degrees.

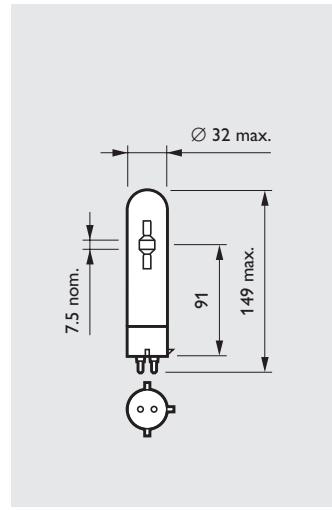

Note

ALL LAMPS IN UV-BLOCK FOR REDUCED HEALTH/FADING RISK

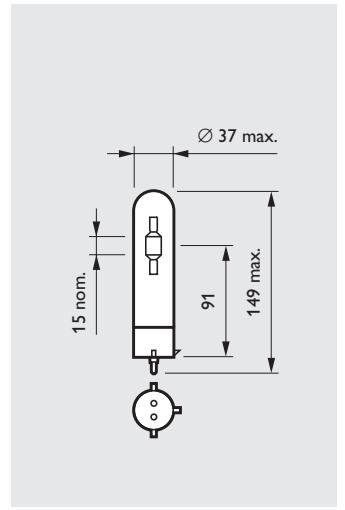

Applications

- MHN-T(D): Indoors - accent and general lighting in downlighters.
- MHW-TD: Indoors - downlighters, uplighters and wall-washers e.g. in shops.
- MHN-T(D) and MHW-TD: Outdoors - floodlighting monuments, facades and billboards.
